

User stories:

I as a daily driver/commuter, should be able to learn the live traffic info on the route.

I as a restaurant owner, want to know what time is the most popular for ordering from food delivery apps.

I as a customer, want to know which item is in-store and near me.

I as a game publish company, want to know if the players like the newly published video game or not.

I as a gamer, want to know what other players think of the most recent video game.

I as a music producer, want to know if the audience likes my new track or not.

I as a film producer, want to know if the viewer likes the film or not.

MVP:

A tool that can search among most recent Twitter posts about keywords by using the Twitter API and then analyze its sentiment by using Google NLP API.

Users:

Drivers, Players, Shopper, Producer, Company Manager, Developer. Store owner
